

FARHAN HAMZAH

Bandung, Indonesia | farhanhamzah125@gmail.com | +62 856 4075 6366 | [Linkedin](#) | [Github](#)

Summary

Results-driven Informatics undergraduate with a strong foundation in mathematics, data, and software systems. Specializes in machine learning development, data processing pipelines, and AI integration. Proficient in building and training models with TensorFlow and PyTorch, data manipulation with Pandas, visualization with Tableau, and database querying with SQL. Experienced in Python and Golang. Actively seeking internship or project collaboration opportunities in Software Engineering, Data Engineering, AI Engineering, or Machine Learning Engineering.

Education

Telkom University

Bandung, Indonesia | Present

Bachelor School of Computing | GPA : 3.73

SMA Negeri 1 Dukuwaru

2021 - 2024

Mathematics and Natural Sciences | Final Score 89.72

Experience

AI X SoftDev : Bootcamp GDCoC Telkom University

Aug 2025 - Sept 2025

Best Participant · Bootcamp Member

- Built a personal fitness chatbot powered by Gemini API, generating real-time workout plans tailored to user body conditions and fitness goals.
- Integrated the chatbot with Google Calendar via Google Cloud API to enable tool-calling functionality.
- Implemented a Retrieval-Augmented Generation (RAG) feature using the LangChain framework to enhance response accuracy.

Computing Laboratory

Oct 2025 - Present

Head of Competitions

Jun 2026 - Present

- Lead the competition division, directing strategy and member selection across multiple national-level competitions.
- Mentor and coordinate members/teams in technical preparation, covering problem-solving strategy and competition-specific skill-building.
- Establish structured training pipelines to improve team readiness ahead of competitions.

Active Member Division AI Eng

Oct 2025 - May 2026

- Contributed to end-to-end AI system development covering data preprocessing, model training, and production deployment.
- Collaborated in a cross-functional team to build and optimize AI models for internal research and product use cases.
- Participated in research initiatives, workshops, and knowledge-sharing sessions on AI Engineering, MLOps, and model deployment

Artificial Intelligence Laboratory

Oct 2025 - March 2026

Active Member

- Conducted research and development in Machine Learning and Computer Vision as part of an applied AI lab.
- Built end-to-end AI pipelines spanning data processing, model training, evaluation, and deployment in a collaborative team setting.
- Contributed to publication drafting, technical discussions, and internal presentations on emerging AI topics.

Practicum Assistant

February 2026 - Present

- Facilitated Go programming practicum sessions for 20+ students, providing real-time debugging support and code optimization guidance.
- Mentored students on core algorithm and data structure concepts including recursion, arrays, sorting, and searching through a case-study approach.
- Coached students in breaking down complex problems into structured, implementable solutions using systematic problem-solving frameworks.

Projects

TensorLease — HPC Retainer Management Platform | [GitHub](#) · [Live](#) *Spring Boot 3 · React · Supabase · PostgreSQL · Midtrans Snap · Railway*

- Built full-stack HPC retainer platform with JWT auth, automated invoice scheduling, and Midtrans payment gateway integration; deployed to Railway.

Tweet Classification System | [GitHub](#) · [Live](#) *FastAPI · Supabase · Docker · Vercel*

- Developed backend API for real-time tweet classification using NLP model; containerized with Docker and deployed to Vercel.

Hybrid AI: Handwritten Math Expression Solver | [Streamlit](#) · [GitHub](#) *Python · CNN · OpenRouter API*

- Built a hybrid AI system combining a local CNN model for handwritten character recognition with OpenRouter cloud LLM to solve mathematical expressions including calculus and algebra.

Restaurant Self-Ordering System | [Customer](#) · [Admin](#) *Spring Boot · Java · Vercel*

- Built a full-stack restaurant self-ordering platform with separate customer and admin interfaces, eliminating manual queue-based ordering.

Competition

World Computer Hacker League
Team Member | OriginStamp

July 2025 – Sept 2025

- Developed and maintained the backend for a blockchain-based digital timestamping application on ICP (Internet Computer Protocol) using Rust, targeting high throughput and fault tolerance.
- Designed RESTful APIs for timestamp creation, verification, and lookup, integrated with ICP nodes for on-chain data retrieval.
- Implemented relational database storage for timestamp metadata and optimized SQL queries, improving data access performance for high-frequency lookup operations.

Digiwar | VISIONARY
Team Lead | PoriPori AI

July – August 2025

- Built a skin disease classification system using ResNet50 with transfer learning, achieving ~95% validation accuracy across multi-class dermatological categories.
- Implemented image preprocessing pipeline including normalization, resizing, and data augmentation to improve model robustness against input variations.
- Led end-to-end project delivery from dataset preparation and model training to evaluation and final presentation as team lead.

Skills

- Languages: Python, Golang, Java, C++, JavaScript, Rust
- ML/AI: TensorFlow, PyTorch, Scikit-learn, OpenCV, HuggingFace, LangChain
- Data: Pandas, NumPy, Matplotlib, Tableau, MySQL
- Frameworks: Spring Boot, FastAPI, React
- Tools: Git, Docker, Supabase, Postman, Vercel, AWS
- Spoken: Bahasa Indonesia (Native), English (Advanced)
